

SUPER GLUE

Wynn's SUPER GLUE Kit contains an industrial strength cyanoacrylate adhesive and an activator for instant bonding. Medium to low viscosity cyanoacrylate is used for a variety of bonding applications, but is ideally suited for bonding plastics, glass, metal and rubber to themselves or in various combinations.

Applications

Ideal for assembling, bonding and repairing mouldings, housings, spoilers, bumper trim, window catches, aerials.

USEFUL HINTS/NOTES

Bond time is relatively fast so ensure parts to be bonded are properly aligned. The activator is particularly useful when there are gaps or porous surfaces.

Properties

Metal/Metal <25 seconds Plastic/Plastic <10 seconds Rubber/Rubber <5 seconds

Instructions for Use

- Ensure parts are clean, dry and free from oil and grease.
- Product is normally hand applied from the bottle. Apply sparingly to one side and hold parts together until handling strength is achieved.

Storage

Store in a cool area out of direct sunlight.
