

COPPER GREASE

Wynn's COPPER GREASE is a specialised high temperature lubrication and anti-seize compound.

PROPERTIES

- Protects metal components against corrosive damage, heat and water ingress.
- Cures and prevents brake disc squeal.
- Protects heat stressed metal components from seizure.
- Operates effectively at temperatures up to 1100°C.
- Eases future dismantling.
- Reduces corrosion, chemical resistant.

APPLICATIONS

- Recommended for use on spark plug threads and exhaust U-bolts to aide future dismantling.
- For brake disc assemblies (avoid excess contacting the friction surface)

DIRECTIONS

- Ensure the surface or component to be treated is free of grease, clean and dry.
- Shake can and apply evenly
- After use, immediately invert can and spray briefly to clear nozzle, otherwise blockages may occur.
